## **Top End Uranium's Commitment to Aggressively Pursuing the Potential of its Extensive Portfolio Package is Reflected by the Encouraging Results from a Recent Field Inspection**

*Top End Uranium Ltd (TEU) has demonstrated its commitment to aggressively pursuing the potential within its Mineral Rights that collectively cover over 34,000 sq km in a number of prospective uranium regions in the Northern Territory of Australia.*

The Company just listed on the ASX in December 2007 and it has already achieved an important milestone via the encouraging results from a recent field inspection that was conducted of the Door Creek and Koolendong anomalies in its Yambarra Tenements.

I had the opportunity to speak with Mr. Ian Richer, TEU's Executive Director. Mr. Richer gladly found the time to highlight the significance of this development.

"This recent field inspection was triggered by an airborne radiometric and magnetic survey that identified a substantial number of previously unknown radiometric anomalies," Mr Richer said explained to the Australian Investor.

"The field inspection was aimed at evaluating these anomalies. The results were better than expected and provided support for further detailed ground work. We have now secured two drill rigs and our current priority is to drill these targets within the next couple of months."

According to Mr. Richer the future outlook for TEU is very encouraging, especially when considering the Company's prime position within the Northern Territory.

TEU's Yambarra Tenements comprise 8 granted exploration licenses and 5 exploration licence applications in an area that is approximately 150 km to the south of the Rum Jungle uranium deposit.

Its McArthur South project area comprises a contiguous group of 7 granted exploration licences and 1 exploration licence application, situated approximately 120 km east south east of the Pandanus Creek / Westmoreland uranium field that hosts significant uranium mineralization discoveries.

The Company's Arnhem Land project area comprises 4 granted exploration licences and 31 exploration licence applications. It lies to the east and south east of the East Alligator River uranium deposits.

Another advantage of this area is its easy access to infrastructure, which will significantly aid the Company's potential transition into the development stage.

Furthermore, TEU is well resourced placing it in a strong position to continue the roll out of its strategic exploration plan.

Mr Richer concluded: "TEU has one of the largest tenement positions in the Northern Territory. The geological features we've recently identified, as well as the number of

previously unknown anomalies, indicate an exciting potential for further significant uranium discoveries, which will deliver real benefits to our shareholders.”
